

Cloud Network & Access Control Architecture for Internal Applications

1. Project Objective

- Design a **secure cloud network** for an internal application.
- Application must be accessible to employees via **controlled paths**.
- Protect servers from external threats and simulate real-world mistakes.

2. Network Architecture

Diagram:

[Bastion Host] (Public Subnet, Public IP)

|

[Private EC2] (Private Subnet, no Public IP)

- **Bastion Host**: Public IP, only SSH allowed from office/home IP
- **Private EC2**: No public IP, hosts internal application
- Security Groups restrict access to **Bastion only**
